Winter Road Conditions

BACK TO TOP

Winter road conditions represent the current condition of major roads in Missouri with respect to the impact from winter precipitation. There are four (4) conditions: clear, mostly clear, partly covered and covered. If a road is bad enough that it warrants a closure, a traffic impact will be entered (see Iraffic Impacts at the top of this report.) A description of three of the conditions (covered, partly covered and mostly clear) can be found at this MoDOT web page: Winter Driving. Below is a table of all winter road condition records. It is sorted according to type of road (interstates first and then lesser roads follow) and road name. The table contains (from left-to-right):

- Route Name: Includes a graphic shields to help describe the route type.
- Narrative Location: This is typically stated as 'start location' TO 'end location':
- Road Condition: The current condition of the road according to the four categories above.
- Last Update: The date and time that the last update occurred.
